

Okay, how exactly is this even an issue? The people that listen to satellite radio PAY ten dollars a month to have the choice of undedited commercial free content that we have. Weather and Traffic reports are harmful to traditional radio stations how? this is a service XM is able to offer its CUSTOMERS (not just listeners) Grated I dont live in a major area that the traffic and weather stations on XM cover but I am still shocked that this is even an issue. I gave up on traditional radio to play the content I wanted and was using CDs exclusivly untill XM came around. I gladly pay my monthly bill so that I can enjoy the broad range of programming that XM has to offer.
